JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum
– copper alloy 192
– gallium arsenide 26, 204
Ammonium
– dihydrogen phosphate 226
Apparatus
– for in situ observation
– – of surface morphology 342
– for melt growth
– – by Czochralski method
– – – of silicon 273
– – by floating zone method
– – – with electron beam heating 180
– – by modified liquid encapsulated Czochralski
– – – of gallium arsenide 13
– for surface tension measurements
– – of molten silicon 60
– for thin film growth
– – by hot wall epitaxy 46
– – by vapor phase epitaxy
– – – through chemical vapor deposition, pancake configuration
– – – – of silicon 375
– – – through metalorganic chemical vapor deposition
– – – – from special source evaporator 359

Barium
– lead bismuth oxide 295

Cadmium
– selenide 38
– telluride 261
Calcium
– oxalate dihydrate 369
Cerium
– oxide 359
Characterization
– by point focus source of X-ray double crystal
– – of crystalline perfection 387
– by transmission electron microscopy
– – of nanopipes in alpha gallium nitride 396
Computer simulation
– of fluid flow 66
– of heat transfer 66, 213
– of interface shape 66
– of molecular beam epitaxy growth mechanism of gallium arsenide 31
– of structural morphologies 348
– of temperature distribution 285
Convection 153, 235
Copper
– lanthanum oxide 102
– neodymium oxide 102
– (I) oxide 305

Defects
– growth induced 335
Dendritic growth
– of calcium oxalate dihydrate 369
Device characterization
– electronic materials 243, 312
– heterojunction 26
– photocathodes 26
– quantum wells 46
– scintillation detectors 127
Diamond 312, 319
Diffusional control
– of calcium in lead sulphide/lead calcium sulphide superlattices 46
– of diamond growth 312
– of ion implanted cadmium selenide 38
– theory of 204
Dissolution
– enthalpy of 102
Dopants
– of antimony in silicon 291
– of iron in zinc tungstate 127

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 127

Gadolinium
– vanadate 393
Gallium
– aluminum arsenide 26
– antimonide 1, 9, 235, 396
– arsenide 13, 26, 31, 91, 204, 220
– indium antimonide 21

– indium arsenide 80
– nitride 220, 249, 396
– selenide 114

Heterojunction, see Device characterization
Hydrodynamics, see Convection

Indium
– aluminum arsenide 243
– antimonide 235
– gallium arsenide 204
Iron
– oxide 134
– silicon 180
– sulphide 325

Kinetics
– of growth 1, 26, 52, 80, 121, 145, 153, 163, 173, 230, 249, 348
– of interface control 261
– of nucleation 173, 230
– of rapid thermal annealing 254

Lasers, crystals for
– gadolinium vanadate 393
Lead
– calcium sulphide 46
– fluoride 107
– sulphide 46
Lysozyme 153, 163, 173

Magnesium
– niobium oxide 365
Melt growth technique
– by Bridgman–Stockbarger method 213
– – of indium gallium antimonide 235
– – of nonlinear organic optical materials 140
– by Czochralski method
– – of gadolinium vanadate 393
– – of gallium antimonide 9
– – of gallium arsenide 13
– – of magnesium niobium oxide 365
– – of silicon 60, 187, 273, 285, 291
– by floating zone method
– – of iron silicon bi-crystal 180
– – of silicon 60, 66
– – theory of 66
– by liquid encapsulated Czochralski
– – of gallium antimonide 9
– – of gallium arsenide 13
– by uniaxial solidification
– – of aluminum copper 192
– – theory of 192
Mercury
– cadmium telluride 254
Microgravity, growth under
– of lysozyme 153
– of silicon 60
– theory of 213
Morphological stability
– of cadmium telluride 261
– of potassium dihydrogen phosphate 342

Nucleation
– of bulk defects in silicon 273
– of diamond 319
Numbers
– Grashof 66
– Peclet 66

Phase diagram
– of barium lead bismuth oxide 295
– of copper lanthanum oxide 102
– of copper neodymium oxide 102
– of crystalline amorphous silicon 200
Photocathodes, see Device characterization
Potassium
– dihydrogen phosphate 145, 226, 342
Precursor
– for gallium antimonide 1
– for gallium arsenide 220
– for gallium nitride 220
– for gallium selenide 114

Quantum wells, see Device characterization

Scintillation detectors, see Device characterization
Silicon 60, 66, 187, 200, 273, 278, 285, 291, 375
– germanium 52
Silver
– bromide 335
Solution growth technique
– by double jet precipitation
– – of silver bromide 335
– by flux method
– – of barium lead bismuth oxide 295
– – of copper lanthanum oxide 102
– – of copper neodymium oxide 102
– – of diamond 312
– by gel
– – of calcium oxalate dihydrate 369
– by low temperature method
– – of alpha-lead fluoride 107
– – of ammonium dihydrogen phosphate 226
– – of lysozyme 153
– – of potassium dihydrogen phosphate 226
– – of silicon 278
– by high pressure
– – of lysozyme 173
– theory of 163
Superconductivity materials, high T_c
– bulk
– – of barium lead bismuth oxide 295
– – of Tl–Sr–Ca–Cu–O 300
Superlattices, multilayers
– of IV–VI compounds 46

Surface morphology
– of potassium dihydrogen phosphate 145
– of tungsten bronzes 121
Surface structure
– by atomic force microscopy 249
– of cadmium telluride growth interface 261
– of tin as a surfactant on silicon/germanium 52

Thin film growth, epitaxy 230
– by liquid phase epitaxy
– – of silicon 278
– by metalorganic molecular beam epitaxy
– – of gallium arsenide 220
– – of gallium nitride 220
– by molecular beam epitaxy
– – of gallium arsenide 31
– – of indium aluminum arsenide 243
– – of silicon germanium 52
– – of zinc magnesium selenide 267
– – of zinc selenide telluride 267
– – theory of 31, 91
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of copper(I) oxide 305
– – – of silicon 200
– – through chemical vapor deposition, microwave plasma
– – – of diamond 319
– – – of Tl–Sr–Ca–Cu–O 300
– – through evaporation and condensation
– – – of gallium selenide 114
– – – of lead calcium sulphide 46
– – – of lead sulphide 46
– – through hydride
– – – of gallium indium arsenide 80
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 26, 204
– – – of cerium oxide 359
– – – of gallium arsenide 26, 204
– – – of gallium indium antimonide 21
– – – of gallium nitride (alpha) 396
– – – of indium gallium arsenide 204
– – – of iron sulphide 325
– – through metalorganic chemical vapor deposition, plasma enhanced
– – – of gallium nitride 396
– – – of iron oxide films 134
– – theory of 204
Tungsten
– bronzes 121
– disulphide 224

Vapor growth technique
– by evaporation and condensation
– – of cadmium telluride 261
– – of tungsten disulphide 224
– – theory of 384
– by metalorganic chemical transport
– – theory of 204

Whisker growth
– of tungsten disulphide 224

Zinc
– magnesium selenide 267
– selenide telluride 267
– tungstate 127
